Mean income

Mean income has been calculated for the demographic groups by the following means:

- (a) Incomes <\$15,000 = \$15,000
- (b) Income ranges = range mid-point
- (c) Incomes >\$500,000 = \$750,000
- (d) It is notable that many of the contemporary incomes are much higher than that of the combined surveys. This is caused by people moving into high income brackets where the range of the bracket is large (e.g. \$251-500K) with the consequence that their new income jumps from the mean of the previous bracket (\$200K) to the mean of the new bracket (\$375K).

Other Australian Indexes

The Australian Bureau of Statistics has published, *Measuring Australia's Progress*, which reports on national performance according to about 15 headline indicators and a range of background indicators. This research, however, is confined to objective indicators.

The Australia Institute constructs the Genuine Progress Indicator (GPI) for Australia. This composite index adjusts GDP for a range of economic, social and environmental factors which GDP either ignores or treats inappropriately.

The Centre for Independent Studies publishes a biennial State of the Nation report, covering a wide range of statistical indicators of Australia's well-being. Again, however, this effort is focused on objective indicators – things that can be measured in material terms.

*The Evatt Foundation and the Public Sector Research Centre at the University of NSW produce an annual *The State of the States 2001* report, which assesses the States on 15 indicators of social, environmental and economic policy. Various market research companies include life satisfaction questions in regular surveys, but do not compile a comprehensive and systematic index of wellbeing.*

Clemenger Communications produce an annual Clemenger Report.

UNIPOLAR RESPONSE SCALE

Survey #26.0 Questionnaire

The Australian Unity Wellbeing Index- September 2011

“Hello, my name is I’m calling from I-view on behalf of the Australian Unity Wellbeing Index and Deakin University. We are doing a survey on how people feel about life in Australia that will only take about 7 minutes to complete.”

“To help with our selection process can I speak to the female/male who had the most recent birthday, and is at least 18 years old?”

Instructions: If the person who answers is that person, then continue. If the person is available repeat opening paragraph. If the person is not available, ask when they will be available and organise a call back time.

“The Australian Unity Wellbeing Index involves asking you questions about how satisfied you are with different aspects of your life, and more generally, life in Australia. Would you like to share your views by being involved in the survey?”

“Thank you”

“I’d like to inform you that you do not have to answer any question you do not feel comfortable in answering and you’re welcome to withdraw from this survey at any time. If you do withdraw, your answers will not be included in the analysed results.”

I assure you that your personal details will be stored separately from your answers to the questions.

The information you provide will be used to publish an overall survey result. At the end of the questions I will give you contact details of some people you may wish to contact regarding this project.”

“Do you have any questions about these procedures?”

“Thank you. Now I will ask some questions about yourself.”

We may at any time during this interview be listened to by my supervisor for quality control procedures
